PAWAN KUMAR

Full-Stack Developer — Django + React | AI Product & Agent Builder | Open to Internships

New Delhi, India | pawanriko@gmail.com | github.com/pawanriko | linkedin.com/in/pawanriko
Portfolio: pawanriko.github.io/portfolio/portfolio/ | LeetCode: leetcode.com/u/pawanriko

SUMMARY

BCA 3rd-semester student at IITM Janakpuri, New Delhi. Creator of HireSense AI and Kai-AI — two full-stack Django + React products, both built end to end and deployed live. Focused on Python, Django, React, REST APIs and applied AI; seeking a full-stack / AI internship.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, HTML5, CSS3, SQL

Web / Backend: Django, REST APIs, React, Vite, Django Authentication, django-allauth

Databases: PostgreSQL (Supabase), SQLite

AI Integration: Groq API, Gemini API, OpenRouter, NVIDIA NIM, DeepSeek — multi-provider routing & fallback, tool-calling agents

CS Foundations: Data Structures & Algorithms, Problem Solving

Tools & Testing: Git, GitHub, GitHub Pages, Render, Docker, Django unittest

PROJECTS

HireSense AI *Django · React · PostgreSQL / SQLite · 2025–Present*

Live: hiresense-ai-s8ih.onrender.com | Code: github.com/pawanriko/hiresense-ai

- Built an interview-prep platform with **4** features: ATS resume scoring with a check-by-check breakdown, JD matching with verbatim evidence quotes, AI mock interviews, and an application tracker.
- Architected the scoring engine to stay fully deterministic — AI (Groq / Gemini) generates questions and feedback only, never a score — with graceful fallbacks that keep every core feature running when an AI provider is down.
- Implemented username / password signup and login, released the product as **v1.0.0** and deployed it live on Render, backed by **178** automated tests.

Kai-AI *Django · React · Multi-provider AI · 2025–Present*

Live: kai-ai.antideploy.app | Code: github.com/pawanriko/Kai-AI

- Built a personal AI assistant that integrated **5** AI provider APIs (Groq, OpenRouter, NVIDIA, DeepSeek, Gemini) behind one chat interface, with a grouped model picker and cross-provider fallback.
- Added database-backed chat history and long-term memory, an agent mode that calls tools (calculator, date/time, live weather), and a coding mode that reads, writes and runs code inside a locked-down sandbox (allowlisted commands only).
- Deployed live with a production Docker setup; covered by **26** automated tests.

DSA Visualizer *JavaScript*

Live: pawanriko.github.io/DSA-Visualizer | Code: github.com/pawanriko/DSA-Visualizer

- Built an interactive visualiser covering **8** modes — array, stack, queue, linear & binary search and bubble / selection / insertion sort — with live pseudocode highlighting and step-by-step controls (play, step, scrub).

Student Management System *C++*

Web: pawanriko.github.io/Student-Management-System | Code: github.com/pawanriko/Student-Management-System

- Built a C++ console application for student records with persistent file storage, strict input validation, search by name / course and a statistics view — plus a matching web version using the same data file format.

ACHIEVEMENTS

- HackerRank Orchestrate, October 2026 — ranked **#1,802 of 4,094** participants; built and deployed an AI agent during the hackathon.
- Public builder on GitHub — **13** public repositories with full commit history, **690+** contributions and a **44-day** longest contribution streak.
- Daily problem-solving practice in C++ and Python — LeetCode (pawanriko) · HackerRank (zecxoff).

EDUCATION

Bachelor of Computer Applications (BCA) — 3rd Semester

IITM College of Engineering, Janakpuri, New Delhi — focus on Programming, Web Development and CS Fundamentals
